

Improve your network by upgrading your DOCSIS 2.0 equipment

With the growing needs for networking, broadband service providers are encouraging that all subscribers with DOCSIS 2.0 devices update to DOCSIS 3.x devices. DOCSIS 3.x devices offer much higher download and upload speeds, with lower latency. Even if you want to keep your current plan (please check with your specific provider for support), having an updated device can ensure that you are ready to easily update anytime to a higher speed.

Services may be discontinued on DOCSIS 2.0 devices in the near future and according to your service provider's timeline.

Not sure if your equipment is a DOCSIS 2.0 model? Below is the list of ARRIS DOCSIS 2.0 devices:

Cable Modems	SB5100	SB5101	SB5101U	SB5101N	SB5120	SB6182	D5001
Cable Gateways	SBG940	SBG941	SBG900	SBG901	SBG1000		
Voice Modem	SBV5220						

If you have one of these devices, you may be eligible for an upgrade at a discount.

Cable Modems	SB6190 (DOCSIS 3.0)	SB8200 (DOCSIS 3.1)
